

## DID YOU KNOW IN THE UNITED STATES ...

~ Each day, some **30** women are diagnosed with cervical cancer caused by various types of **HPV**

~ Each year, there are some **324,000 new** cases of genital warts caused by **HPV** Types 6 and 11 (**in males and females**)

Low HPV vaccination rates are leaving another generation of boys and girls vulnerable to devastating HPV cancers. Vaccination could prevent most of these cancers. *The CDC is looking to you to make a strong recommendation for HPV vaccination when kids are 11 and 12 years old.*

*Please view their recent webinar “Recommendations for HPV Vaccination 2017 Update” at the link below*
